

AI Agent Specification

1. Agent Information

Agent/Role Name:

Market Research Analyst

Team Member:

Minh Vu

Date:

23/8/2026

2. Role Definition

Purpose of the Agent:

What is the primary purpose of this agent?

The agent is responsible for researching and compiling evidence, using insight that supports the Strategy department's objectives, specifically producing a research pack containing customer/market segments, competitor analysis, trends, and the implications of that evidences, all while staying within its single bounded responsibility. It complies this for the human to make the decision

It reports to the Strategy Manager, and its outputs are subject to manager review

Role Description:

It is responsible for finding evidence about markets, customers and competitors, and packaging that evidence into a structured research pack that the Strategy Manager and downstream agents use.

Key Responsibilities:

- Validate that the incoming request is ready and within scope before starting work
- Load only approved knowledge, examples, data and instructions

- Perform market/customer/competitor analysis in a documented, repeatable sequence
- Separate findings into evidence, assumptions, recommendations and unresolved questions, this ensures we know exactly what information to use and what to follow up on

3. KPIs

Identify how the agent's performance/success could be measured.

KPI	Description	How it is measured
KPI 1: Source quality	Whether the evidence used is credible, approved, provenance requirements during manager review and properly attributed, per handbook's "Correctness" and "Safety" quality checks	Reviewed against the source register / provenance requirements during manager review; checked for traceability of each claim to an approved source.
KPI 2: Coverage	Whether the research adequately addresses the required segments, competitors, and trends specified in the brief, per the "Completeness" quality check.	Assessed against the acceptance criteria
KPI 3 :Actionables	Whether the findings translate into clear implications the Strategy Manager and downstream roles can use to make	Judged during manager review/quality review

decisions, rather than raw data alone.

4. Required Skills

What skills does this agent need?

Skill	Why the agent needs it
Skill 1	
Skill 2	
Skill 3	

Skill 1:Market and competitor research

Why: It's to find evidence about markets, customers and competitors; the agent must be able to identify, gather and interpret segment, competitor and trend data from approved sources to build the research pack.

Skill 2:Evidence evaluation and sourcing discipline

Why: The workflow requires it to load *only approved* knowledge and sources, and to separate evidence from assumptions and recommendations so it needs the ability to judge source credibility and keep claims traceable

Skill 3:Structured output / schema compliance

Why: Outputs must match a defined schema: segments, competitors, trends, evidence, implications. And it needs to pass a self-check against acceptance criteria before handoff to the Strategy Manager so the agent needs the ability to organize findings into a consistent, complete, reviewable format.

5. Workflow

Describe the process the agent would follow to complete its responsibilities.

Step 1:

→ Validate that the request is ready and within scope.

Step 2:

→ Load only approved knowledge, examples, data and instructions.

Step 3:

→ Perform the specialist analysis: (Market, Customer, Competitor research) in a documented sequence.

Step 4:

→ Separate evidence, assumptions, recommendations and unresolved questions.

Step 5:

→ Run self-checks against the output schema and acceptance criteria.

Step 6:

→ Package the handoff with provenance, version and escalation flags.

Expected Output:

→ A research pack containing segments, competitors, trends, evidence and implications. and then sent to the Strategy Manager for review

6. Tools / APIs / Resources

What tools, APIs, systems or information sources might the agent require?

(If Unknown please put N/A)

SEMrush or Similarweb: for competitor traffic estimates, market share, and industry/trend benchmarking.

Google Search Console / Google Trends API:for real customer search-demand data and trend signals feeding into the "evidence" and "trends" parts of the research pack.

7. Research / Sources

List the sources used to define the role.
